

Industry Line

Abra Clean

Technical sheet n° 003
Rev. 02/07/2014

Category:

- Products for the textile sector

Applications:

- Cleans and renovates the fabric grinding and cutting wheels

Strenghts:

- Practical use with spray

Product for professional use. The manufacturer declines all responsibility for any damage caused by the improper use of the product.

Cleaner for grinding wheels

Applications

Abra Clean is a product based on several types of medium evaporating solvents, able to dissolve the different types of dirt that are normally found on the grinding and fabric cutting wheels.

Once the product is sprayed on the cutting wheel, it dissolves and blows up substances such as oils, fabric and other chemical remains, without damaging the metals.

How to use

Shake well the product for at least thirty seconds, remove the wheel from the grinding and cutting machine and spray the product on the abrasive from a distance of twenty centimetres until full saturation.

Subsequently, the wheels have to be brushed until the dirt is completely removed and, preferably, ventilated with compressed air.

Alternatively, reassemble the grinding machine and activate it for a short period.

To be used for both circular and linear blades at least once a week.

Scope of use

Abra Clean is used by textile companies ' maintenance services as well as for other specific applications.
