Ardesil Plus

Technical data sheet
n° 875 Rev. 12/01/2016

Category:

- Darkening
impregnating agent

Applications:

- By roller
- By brush
- By cloth

Advantages:

- It gives a natural and
deep colour to dark
stones

Product for
professional use. The
manufacturer
declines all
responsibility for
any damage caused
by an improper use
of the product.

**Ecological walkable impregnating agent.
Renews slate and dark stone whitened by
acids or weather**

Applications

Ideal to protect and restore hues to stones such as slate, black marble, granite and dark porphyry whitened by atmospheric agents, water washout or improper use of chemicals. Ideal for different surfaces such as outdoor flooring, roofs, exposed facades, Ardesil Plus enters the porosity of the material, fixing a reviving pigment that renews and darkens the stone. The final effect is a homogeneous darkening one, combined with a protective effect against rain, thermal changes and sun.

Method of Use

The product should be used as it is. It can be distributed by roller, brush or cloth depending on the situation and on the surface to be treated (vertical or horizontal).

One coat is usually sufficient. For some very porous stones, it may be necessary to apply two crossed coats, waiting for the first coat to dry before applying the second one.

Avoid applying the product on surfaces directly irradiated by the sun and/or very hot.

Fields of application

The product is widely used as a regenerating and protective reviving agent for:

- Slate (Blackboard)
- Dark granite
- Dark porphyry
- Black marble

For different surfaces, such as:

- Outdoor floors
- Low walls
- Visible stone facades
- Various coverings
- Garden furniture
