# Marmolux

Technical data sheet  
n° 220 Rev. 16/02/2018

## Category:

- Wax for marble floors

## Advantages:

- Self-polishing
- Easy to use
- Resistance to footfall

Product for professional use. The manufacturer declines all responsibility for any damage caused by an improper use of the product.

## Self-polishing wax for marble floors with high resistance to footfall

### Applications

Marmolux is a special blend of superior quality waxes, natural and synthetic, specific for marble floors and covering, on which it can be used in complete safety, given its neutral formula, its high resistance to footfall and the presence of a slip resistant additive.

Marmolux is self-polishing and makes the floors shiny with no effort and without having to use the polisher or to pass over with a cloth, leaving a pleasant scent.

### Fields of application

- Communities
- Hotel sector
- Restaurants
- Domestic use
- Offices
- Craft and small industry

### Method of Use

Before using Marmolux, carefully wash the floor with a suitable detergent (Marmosol), also eliminating any non-specific waxy treatments, otherwise the brilliance will be quite poor.

Pour Marmolux onto a damp cloth and spread evenly. The product must be applied crisscross first horizontally and then vertically. Marmolux wax is recommended for all floors made of marble, even if of various types or with a polychrome composition. For daily maintenance of the treated floor, we recommend the use of a neutral pH product, such as our Marmoclean detergent. The common wash & wax products are not recommended.

**Yield:** The recommended dose of Marmolux is 15 ml per m<sup>2</sup> of surface to be treated (about a small cup of coffee per 3 m<sup>2</sup>).

**Dilutions:** For a deep waxing, apply the product as it is, or if necessary, for an easier application, diluted in a minimum quantity of water.
