Solcott

Technical data sheet
n° 192 Rev. 28/04/2014

Dewaxing solvent for the removal of waxes, resins, enamels and plasters residues

Category:

- Dewaxing solvent

Applications:

- Removal of particularly resistant waxes

Advantages:

- Efficacy
- Fast-acting

Applications

Solcott is a solvent with a very active dewaxing action, which is able to remove quickly residues of resins, waxes, enamels and plasters from floors in earthenware, stoneware, marble and natural stones.

Solcott can be used as a pre-treatment to help the action of Decer Queen Wax remover on old floors, when there are many layers of wax or treatments to remove.

Its rapid evaporation formula and outcome speed make it possible to use Solcott in particularly dirty specific spots.

Fields of application

- Household
- Cleaning companies

Method of Use

Sprinkle the surface to be cleaned with Solcott, a small area at the time. Wait for two minutes or more, depending on the consistency of the layer to be removed, and working it with a hard brush, a spatula or a scouring pad to assist the solvent action. If properly used, the wax or resin will soften quickly, surfacing.

Remove residues with cloths or, after the evaporation of Solcott, with a broom and a dustpan. Do not use water.

It is recommended to use the product only in the presence of an adequate air exchange. Do not breathe the vapours.

Product for professional use. The manufacturer declines all responsibility for any damage caused by an improper use of the product.
