# Strap

Technical data sheet  
n° 176 Rev. 28/04/2014

## Wallpaper remover Removes also additivated tempera treatments

### Category:

- Special products

### Applications:

- Removes wall paper and tempera wall treatments

### Advantages:

- Efficacy
- Concentrated product

Product for professional use. The manufacturer declines all responsibility for any damage caused by an improper use of the product.

## Applications

Strap is a specific product to remove completely wallpaper and additivated tempera treatments. The product is able to swell and make the paper easily removable, as well as to soften the glue used for tapestries or the synthetic parts of most of the wall paints on the market.

## Fields of application

The formulation, suitable for the complete removal of wall treatments, is used for the recovery of many environments, and, given its simplicity and economy of use, it has been used for a long time by:

- Plasterers
- House painters
- Construction companies
- Restructuring companies
- Private and domestic use

## Method of Use

Dilute the product with water, adding the 250 ml bottle in ten litres of water for medium-simple operations, while for the most demanding one use five litres of water. Remove the most easily removable parts of the wallpaper with a spatula or scraper. Spread Strap with a roller or a flat brush until completely saturated and let it act for a few minutes.

Remove the paper and the adhesive with a metal spatula. If tempera treatments are to be removed, after having carried out the previous operations, the final phase of removal must be carried out with a slightly abrasive synthetic sponge instead of the metal spatula.
