

## Industry Line

# Tampon Wash

Technical sheet n° 516  
Rev. 15/05/2014

### Category:

- Water treatment products

### Applications:

- pH modifier for reverse osmosis water

### Strengths:

- Very effective

Product for industrial and professional use. The manufacturer declines all responsibility for any damage caused by the improper use of the product.

## Applications

Tampon Wash is a particular product to use for some process issues, when the osmotic water produced by the plant should have a pH between 7 and 8.

The product, introduced into the water stream before entering the osmosis apparatus, neutralizes the acidity of the produced water, stabilising it at the desired pH.

The product does not contain substances considered harmful to the operators, and does not produce or gives off volatile substances harmful to the environment

## Directions for use

Tampon Wash can be dosed into the water pipe, before the osmosis system.

The required amount of product may vary, depending on the physical and chemical values to be obtained, as the water pH and conductivity.

Storage: the product must be stored in an environment with a temperature above zero degrees Celsius.

Avoid direct exposure to sunlight.

## Technical characteristics

pH	13
Odor	None
Color	None
Density (20°C)	1,065 g/cm <sup>3</sup>
