

# ODORKILL

Technical data sheet n° 583 Rev. 28/03/2014

Environmental odour neutralizer Eliminate all bad smells  
Based on natural plant extracts

## APPLICATIONS:

OdorKill sprayed in the air, is able to neutralize unpleasant odours of any kind. The bad smell is not just covered by a perfume, but rather "encapsulated" and inactivated.

Thanks to this mechanism of action, OdorKill does not have a strong dominant fragrance, which might not be pleasant to everyone. The slight scent note, present after its use, indicates a sufficient application of the product in the environment.

OdorKill can be used safely in all environments, to eliminate smells of smoke, dustbin, animal bedding, sweat and in all places where a bad smell occurs, as in the kitchen (fried food, fish, garlic, cabbage), in the bathroom, etc.

Odorkill is a special blend of essential oils of plant origin and therefore has no harmful effect on people, animals and plants and can be sprayed in closed spaces, even small ones.

## METHOD OF USE:

The product is already in solution ready to be used. Spray in the air, possibly upwards, to facilitate dispersion into the environment. Three or four sprays (6÷8 ml) are sufficient for a volume of about 30 m<sup>3</sup> (a room of about 10 m<sup>2</sup>).

## CATEGORY:

- Deodorants and odour neutralisers

## ADVANTAGES:

- Does not cover up odours but eliminates them
- Based on natural plant extracts
