

PETTIN BRILL

Technical Sheet n° 134 Rev. 03/07/2014

Spray detergent for cleaning reeds

APPLICATIONS:

Pettin Brill is a product for textile reeds able to provide a good lubrication and antistatic effect, without leaving any greasiness or stains on tissues.

Pettin Brill's organic -silicon components have a low chemical reactivity and can be safely used on metals, tissues and rubber.

Pettin Brill resists high temperature and provides complete and safe lubrication.

Pettin Brill has a good degreasing power on smooth surfaces (metals or plastics) and if used regularly over time can help to keep tools in good condition, diminishing maintenance interventions, as it is odorless, colorless and leaves no traces.

METHOD OF USE:

Shake well the spray can for at least 20 seconds before spraying. When using it is not necessary to insist on the part to be treated as only a light vaporization from a distance of 20 cm is sufficient for a complete lubrication. The product has been developed to be used directly on looms. Thus, Pettin Brill can be used exclusively in the textile sector.

FIELD OF APPLICATION

- Effectiveness
- Practical use with spray
