

QUEEN CB13

Technical data sheet n° 165 Rev. 01/04/2014

Self-shining anti-slip wax for earthenware. Ideal also for stoneware

APPLICATIONS:

Queen cb13 is a wax particularly suitable for polishing earthenware. Its anti-slip feature makes it ideal for environments where maximum walking safety is required and its self-polishing properties make it a product easy and recommended to use. Ideal also for stoneware.

METHOD OF USE:

After having thoroughly cleaned the floor, apply the wax as it is with a cloth evenly on the surface, spreading it both horizontally and vertically (crosswise) and allow to dry. For an easier application, the product can be diluted in water in a proportion of 1: 1.

For a greater shine, pass a floor polisher or a woollen cloth.

The indicative consumption is 25/30 ml (half a small coffee cup) per m² of floor. Important: to avoid streaks it is good to complete the wax application on the entire floor surface in one go before it dries.

Avoid pouring Queen cb13 directly on the floor or leaving the rag soaked in the product on the tiles for a long time, as some stains may remain. In case of matting due to footfall, gloss can be restored by passing a soft cloth or a floor polisher.

Protect from frost.

CATEGORY:

- Product for earthenware and stoneware

ADVANTAGES:

- Anti-slip
- Self-shining
- Re-polishable
