

RAVVIVANTE PER GRES

Technical data sheet n° Rev. 28/04/2014

Revives and protects traditional stoneware floors

APPLICATIONS:

Thanks to its formula based on raw materials of natural and synthetic origin, Rattivante per Grès (Stoneware reviver) revives floors and artefacts in earthenware, stoneware and bricks. The final effect is similar to that obtained with linseed oil but, thanks to its fluidity, the product penetrates better and deeper, drying more quickly, without leaving unpleasant smells.

Rattivante per Grès can therefore be considered the modernization of the treatment based on linseed oil.

METHOD OF USE:

Wash the floor and remove the old treatments, let it dry and apply the product with a soft cloth, first horizontally, and, after it dries, vertically. If the floor is very porous, as for earthenware floors, it is advisable to repeat the cycle. When the product is applied on bricks or building materials, it should be used simply with a brush with several passes, until it is completely absorbed.

CATEGORY:

- Products for earthenware and stoneware

ADVANTAGES:

- Very fluid
- Nearly odourless
- Long lasting
