

STAC COL SPRAY

Technical Sheet n° 498 Rev. 09/12/2015

Remove glue from the cylinders of the textile sector

APPLICATIONS:

Stac Col Spray is a specific product to remove the glue from the cylinders of the textile sector. A newly developed, free of chlorinated solvents, made from biodegradable components.

Excellent in the removal of almost all the glues, both by metal supports, which by wood.

It does not attack metals, wood and plastics for industrial use to which it is used. Indispensable in cleaning operations of the cylinders and in the industrial maintenance in general. Excellent for aluminum and alloys. It does not contain acidic or alkaline compounds, methylene chloride, trichlorethylene, aromatic solvents, benzene etc.

Thixotropic, clings to surfaces without sagging.

It can be easily removed with water at ambient temperature. It does not affect most of the plastic materials: it is advisable to make a preliminary test.

Avoid contact with painted surfaces.

METHOD OF USE:

Spray Stac Col on the cylinder, wait a few seconds, then remove with a spatula or cloth.

In the case of incomplete removal of glue, try again.

STRENGTHS:

- Effectiveness
- Easy to use
