

SBLOCCA

Technical Sheet n° Rev.253 03/07/2014

Unlocking and protective lubricant spray

APPLICATIONS:

Sblocca is a product with three functions:

- Unlocking - thanks to some solvents able to eliminate fats and oils residues, even partially carbonized, and to the presence of slip agents to facilitate unscrewing, acting as friction moderators;
- Lubrication - thanks to paraffinic oils that lubricate the mechanical parts, both disassembled and assembled;
- Protection - thanks to anti-rust additives with a hydrophobic nature, which, remaining on the piece, ensure long-lasting protection over time.

METHOD OF USE:

Shake well the canister and carefully sprinkle the part to be treated. Leave to act and then proceed. It may be useful to use the supplied extension tube, directing the jet only where there is a real need for intervention.

FIELD OF APPLICATION

The product can be used wherever you need one or more of the three features of Sblocca, in environments such as:

- Car repair shops
- Maintenance departments
- Precision engineering.
- Lubrication of mechanical parts
- Protection of metal parts
- Hobby or D.I.Y.
- Mechanical workshops
- Domestic maintenance
