

SILISPRAY

Technical Sheet n° 186 Rev. 05/02/2016

Anti-adhesive silicone

APPLICATIONS:

Silispray is a release agent for moulding of thermoformed and plastic parts obtained by blowing, thermosets, natural and synthetic rubber. Silispray rapidly evaporates and forms a film of release oil on the mould to be treated.

The continuous use of the product avoids problems such as welding between plastic and moulds, with resulting annoying and repeated production stops and an early wear and tear of the moulds themselves.

Silispray can also be used as a plastic and metal protection, as a lubricant for special purposes and as a temporary waterproofing agent.

METHOD OF USE:

Shake before using. After having cleaned and degreased the parts to be treated with suitable solvents (for example with Solfast or HB 25 Sol), uniformly distribute the product from a distance of about 35 cm from the mould; the best result will be obtained after two or three print runs.

Re-apply when necessary.

STRENGTHS:

The product is advisable in various sectors thanks to its high flexibility, specifically in the following:

- Production of thermoplastics
- Moulded plastic objects
- Blow-moulding of packaging
- Lubrication of mechanical parts
- Temporary waterproofing
(Folding tops, marquees, tents)
- Metal protection
- Protection of particular complexes
