

SOLFAST SPRAY

Technical Sheet n° 203 Rev. 03/07/2014

Spray degreasing agent

APPLICATIONS:

Solfast Spray is a product consisting of a mixture of rapidly evaporating aliphatic solvents and solution additives that increase the effectiveness against fats and oils.

Solfast Spray is particularly effective against oils and fats of both mineral-synthetic and natural origin, as well as against traces of markers and some types of resins. It has also proved to be useful on metals of all kinds, including light alloys and aluminium, and on some plastics.

The tests carried out on some resins ensure that Solfast can be used with a good margin of safety on:

- Melamine resins
- Moplen
- PVC
- Solvent based epoxy and polyurethane resins

For the use of the product on other resins, it is advisable to carry out first a test.

METHOD OF USE:

Spray on the part after having shaken well the canister and pass over with a clean cloth. Repeat the operation if necessary.

FIELDS OF APPLICATION:

Solfast Spray is used in various sectors and in particular in:

- Mechanic industry
- Nautical sector
- Machine maintenance departments
- Furniture manufacturers
- Craft workshops
- Textile industry (for cleaning yarn clearers)
- Anywhere a solvent-based degreaser with rapid evaporation and low chemical reactivity is needed.
