Alcoholic sanitizer for objects and surfaces

Applications

Sanitizing spray for objects, furnishings, shelves and furniture in general, in domestic or professional environments, both public and private. Thanks to its high alcohol content (> 70% net of propellants), it sanitizes the surfaces thoroughly, while leaving a pleasant fresh and clean fragrance. Can be used on various materials (wood, metal, glass, composite materials, etc.). Pay particular attention to plastic and painted materials. Test the product on a small surface to check compatibility with the material to be treated.

Use mode

Shake the can well and spray the product on the surface of the object to be sanitized from a distance of about 20 cm.

Remove any excess with a soft cloth.
