Abradet Spray

Technical data sheet
n° 013 Rev. 26/02/2014

Category:

- Polishing metal cleaner

Applications:

- Removes oxides

Advantages:

- Easy to use

Product for professional use. The manufacturer declines all responsibility for any damage caused by an improper use of the product.

Flux polishing cleaner for brass, bronze, copper and steel

Applications

Abradet Spray is a spray foam able to cleanse, deoxidise and polish various types of metal. Thanks to chemical fluxes and the action of diatomaceous earth, very fine and high hardness abrasives, which are able to remove oxide deposits by polishing without scratching, a perfectly clean and shiny metal surface will be obtained.

The product is recommended for the cleaning of metals such as brass, copper, bronze, steel, aluminium, etc.

Abradet Spray is very useful when a liquid product cannot be used and in cases where cleaning should be perfect and homogeneous.

Abradet Spray is used for cleaning pottery, machinery, fixtures, metal counters, furniture, statues, friezes and more, in areas such as workshops, hotels and communities, catering, furniture, shops, etc.

Method of Use

Shake well the canister. Dispense the foam on the surface to be cleaned and also on the cloth that will be used and pass on the object to be cleaned by pressing lightly in a rotary direction.

If necessary, in case of strong dirt or oxidation, repeat the operation.

On completion, pass a dry and soft cloth on the cleaned objects; it will exalt the gleam of the treated parts.

After the use of Abradet Spray, in order to maintain the obtained gloss over time, it is advisable to use protective products such as Bronzilux or Protector Secco.
