

Industrial Line

Lubispray

Technical Sheet n° 096
Rev. 03/07/2014

Category:

- Special Products

Applications:

- Lubricates effectively in thousand occasions

Strenghts:

- Effectiveness
- Practical use with spray

Product for professional use. The manufacturer declines all responsibility for any damage caused by the improper use of the product.

Odourless colourless lubricant with high chemical inertia

Applications

Lubispray is a lubricant whose formulation is based on highly selected pure paraffinic oils with almost no smell.

Lubrispray is a very good lubricant for medium-low frictions and adheres well and for a long time to surfaces, while protecting metals from corrosion.

How to use

Clean accurately the part to be treated in order to remove possible oily residues. Shake the spray can well, then spray the product while the plant is not functioning and from a distance of at least 20 cm. Wait a few minutes and restart the machine. After having stopped the machine, spray again and restart definitively.

Later on, lubricate according to your need, even while the machine is functioning, using, if necessary, the dedicated cannula provided.

Scope of use

Thanks to its chemical inertia, Lubrispray can be used as general lubricant for mechanical engineering, such as:

- light gears
- ironers, winders
- weapons
- hinges and joints
- small cinematic systems
- other uses.

It is therefore ideal for many working environments, such as:

- building hardware producers and installers
- garages for motorcycles and vehicles
- precision tools
- gun stores
- textile industries
- mechanical industries
- craftsmanship activities
- do-it-yourself
