

## Industry Line

# Deter Lum

Technical Sheet n° 047  
Rev. 15/05/2014

### Category:

- textile machinery cleaner

### Applications:

- Cleans and protects parts and mechanisms of textile machines

### Strengths:

- Great effectiveness
- Double action, cleans and protects

Product for professional and industrial use. The manufacturer declines all responsibility for any damage caused by the improper use of the product.

## Protective cleaner for textile machinery

### Applications

Deter Lum is a solvent-based detergent for cleaning looms, reeds, healds, needles, needle beds, sectors, cylinders of circular knitting machines.

The formulation leaves a very thin protective veil capable of protecting the treated surfaces from corrosion over time. In addition to having a highly antistatic function, it effectively protects the parts that come into contact with the hands, preventing the formation of acid stains caused by human sweat.

Deter Lum does not leave residues on the treated pieces which could lead to dirt retention in the yarns.

### Fields of use

Deter Lum is used in all branches of the Textile Industry:

- textures,
- knitwear factories,
- embroiderers,
- spinning mills,
- hosiery factories,
- ribbon factories, etc.

### How to use

To thoroughly clean the part to be treated, apply the product by brush, spray or immersion.

After the treatment, let it air dry or use a jet of compressed air.

After drying, a protective veil is formed which protects against rust and various kinds of contamination.
