

Industry Line

Soluble Grease O/W

Technical Sheet n° 400/en
Rev. 24/07/2014

Watersoluble Gliding Grease

Category:

- Special lubricant

Applications:

- Lubrication for easy lubricant removal.

Strengths:

- Easily removed by rinsing.
- Water soluble grease

Product for industrial and professional use only. The manufacturer declines all responsibility for any damage caused by the improper use of the product.

General information

GREASE O/W is a lubricant consisting of greasy and oily substances, not from mineral origin, added with surfactants to gliding and emulsifying action, which allow the grease to be water soluble.

GREASE O/W is the ideal solution for processing (tooling, machining, etc.) or for testing processes, where the washing and the removal of common grease is prevented by the artifact size or by the inability of washing mean to reach certain parts.

GREASE O/W is soluble in water in all proportions, it does not require additives such as surfactants or solvents and it can be removed with hot or cold water. If stored at $T > 35^{\circ}\text{C}$, the product can give rise to a slight separation of the liquid on the surface, which is not indicative of degradation. In that case, mix it thoroughly before use.

The product was specifically designed for the engineering industry.

Use

Spread the grease with a spatula or a brush on the interested area. After processing, wash away the excess with a stream of water.

Stir thoroughly before use.
