

Industry Line

Inibitor 205

Technical Sheet n° 922
Rev. 31/01/2018

Category:

- Water treatment product

Applications:

- Deoxygenating

Strenghts:

- Concentrated product

Applications

Inhibitor 205 is a liquid conditioner used to eliminate the oxygen dissolved in the feed water which can give rise to corrosive phenomena from pitting. Its marked reducing properties promote the formation of magnetite on the tube bundle, giving a dark color to the metal and significantly slowing down the gas attack.

Being an all-volatile formulation, it is also excellently used in instantaneous steam boilers

How to use

Inhibitor 205 can be fed either in line or in the feed tank. The dosage must be agreed with the Chemical Roadmaster Technical Service based on the characteristics of the water and the system.

The average dosage, however, can be considered indicatively oscillating between 20 -40 ppm referred to the steam production of the system.

Technical specifications

pH	9,5
Odor	amine
Color	colorless
Density (20°C)	0,995 g/cm ³

Product for professional and industrial use. The manufacturer declines all responsibility for any damage caused by the improper use of the product.
