

Industrial Line

Inibitor 218

Technical data sheet
n° 939 Rev. 12/11/2018

Category:

- Products for water treatment

Applications:

- Deoxygenating

Advantages:

- Concentrated product

Product for industrial/professional use. The manufacturer declines all responsibility for any damage caused by an improper use of the product.

Volatile deoxygenating agent Conditioner for condensate circuits

Applications

Inibitor 218 is a liquid conditioning agent used to eliminate dissolved oxygen in feed water, which can give rise to pitting corrosive phenomena. Its remarkable reducing properties facilitate the formation of magnetite on the tube bundle, giving a dark colour to the metal and significantly slowing down the attack by gas. Being a volatile formulation, it is also excellent for use in instantaneous steam boilers

Method of Use

Inibitor 218 can be supplied both in-line and in the feed tank. The dosage must be agreed with the Chemical Roadmaster Technical Service based on the characteristics of the water and the system. The average dosage, however, can be considered indicatively oscillating between 20 and 40 ppm referred to the steam production of the system.

Technical features

pH	9.5
Odour	Amine
Colour	colourless
Density (20°C)	0,995 g/cm ³
