Protector Marmo Spray

Technical data sheet n°
xxx
Rev. 28/04/2014

Category:

- Protective

Applications:

- It waterproofs all stones, even those with low absorbency and with a glossy finish

Strengths:

- Very fast drying
- Spray application

Product for professional use. The manufacturer declines all responsibility for any damage caused by an improper use of the product.

Invisible stain protector for marble and granite indoors

Applications

Protector Marmo Spray prevents the penetration of oils, fats and water into marble and granite surfaces, protecting them from stains, mold and chemical attacks.

Easy to apply, it is excellent for shiny materials, it lets the stone breathe, does not alter its appearance in any way and does not form a film. Dirty water and oils slide across the surface without spreading or staining, forming large spherical drops.

The product is specific for protecting: kitchen tops, bathrooms, marble and granite countertops, works of art.

How to use

Thoroughly clean the surface to be treated with Marmosol Spray, let it dry and spray from a distance of 20-30 centimeters after shaking the can well.

Carry out a single pass at a constant speed on the surfaces, and then immediately wipe over with a soft cloth.

Do not overuse.

If over time the protective effect tends to decrease, no longer creating the 'drop effect', it will be sufficient to spray the product again as described above.

The product does not defend the marble from acids (lemon juice, vinegar, etc.)

Yield: on average 150 gr/m²

Drying time 10/20 minutes.

However, maximum protection is achieved 24 hours after treatment.
